Tellus is Robertson's extensive play fairway and petroleum systems database and provides New Ventures groups and explorationists with a comprehensive and consistent tool for understanding play and basin scale petroleum geology worldwide. The Tellus group of products includes **Frogi**, a geochemical interface which provides a comprehensive database of geochemical data for rocks, oils, gases and seeps worldwide. In addition, **GlobalFields** uses specific field data to analyse the success and maturity of basins and plays for direct and analogue comparisons.
